Hi,

I've got a weird one here. When I run xine in a "keep above others" window over a konqueror window, but with the konqueror window active, konqueror activates and deactivates access keys (the little yellow boxes with letters in them you get when you press CTRL) every ten seconds.

I'm not sure where to start with this one. I hypothesise that xine is causing a CTRL keypress event, possibly to prevent screensaver, but I have no idea of the code in either xine or konqueror, so I could well be talking rubbish.

Where do I take this? Who should I submit a bug to? I'm not sure if it's a konqueror bug or a xine bug.

Not on the list, please CC me.

Peace,  
Brendon
