Bruno Costacurta <pubmb01@xxxxxxxxxx> wrote:

Hello,

I have a Marvell Ethernet card (on motherboard) model 88E8053. It is not recognized by Etch (however the CD I tried to install from is rather old +- 1 year). (note: under Fedora 6 it is recognized and works fine with driver sky2)

What is the current situation / support about Marvell 88E8053 under Etch ?

As my Etch CD is rather old do I need to burn a new one ?

If so where can I check which hardware is supported in .iso Etch to avoid unnecessary download ?

Do I need to make some 'home-computing' like download driver and/or source (via a supported Ethernet card) card to build my own module..etc.. ?

Thanks for any clue and information.

Bye,  
Bruno

since it is a kernel module, if it is present in a kernel version in one distro it is present in another, i.e. , Debian. You may have to manually insert the correct module if the install system fails to pick it up. 'modprobe <module name>' at a second vt.

Use a daily-build net-install disk to get an uptodate install disk.
