Now I have a folder that can be seen in XP and I can place files there, or from Xubuntu, so I can share files and send files from one to the other.

A question more: I think this is the fastest way now to share. Is this as secure as SCP ?

No. This is not at all secure. No encryption. If this is all on your own local network segment, it is probably OK. Over the public Internet, this would be terribly bad.

Regards,

–Roberto
