We're running a wiki on a debian box (using moinmoin) and I'd like to set up a simple web-based system that allows users to upload images. What I'd like a cgi that lets a user submit an image, stores it on the web server and returns a permanent link to it that can be used in the wiki. Does anyone know if such a thing already exists?

Interesting. A while back I proposed on the debian-devel list an official screenshot repository, which would allow users to submit screenshots of various programs in use. This is one of the components which we need, so that people can upload images in a structured way. I have not made a great deal of progress lately since school is taking my time. However, if you would like to help out with this, please let me know. If not, I should have something in May.

Regards,

-Roberto
