Please BCC me as I'm not subscribed to the list.

I'm trying to download the DVD installer images for AMD64 via jigdo using the templates available at [cdimage.debian.org/cdimage/etch\\_di\\_rc2/amd64/jigdo-cd/](http://cdimage.debian.org/cdimage/etch_di_rc2/amd64/jigdo-cd/)

I just built those DVD's for i386 and amd64 a few days ago and used both to install. Everything went well.

However I've found that the .jigdo files reference a number of .deb packages which are no longer available in any Debian mirror (because they have been superseded by packages with higher version numbers). Is there any way for me to update the partial image created by jigdo to the actual ISO image I can burn to DVD?

I would try another mirror for the remainder of those files. I've had good luck with <http://debian.csail.mit.edu/debian/> in cases like that.

(A net install is out of the question because of my unpredictable DSL connection. I really need to have the .deb files on a readily accessible medium before I begin my installation.)

Yep, I like to have the debs too, at least to get up and running.
