Seth,

I think you really understood my intentions. And still agree with all of your 6 points. As a personal view, I have the skills to set up a good MUA but this ML makes trouble for my day-to-day usage since I am using several machines, and I am neither root on all of them nor authorized to use bandwidth, ports and protocols the way I want. So, instead of being considered as a flammer by the whole readers, I just tried to point out the limits of this ML. Considering it as a community tools, with high usability for experienced as well as newbies, and not just as a personal problem. Nothing more.

Re: how to read debian-user as newsgroup using Evolution

In the case of needing access from multiple systems, you should use the usenet gateway and a newsreader.

<nntp://linux.debian.user>

or

<http://dir.gmane.org/gmane.linux.debian.user>

<nntp://news.gmane.org/gmane.linux.debian.user>

I've been wondering for a while whether I can 'evolution'
ii evolution 2.0.4-2sarge1 The groupware suite
to read this mailing list (emails) more as a newsgroup to, eg, allow me
to 'kill' a thread (rather than having to manually delete each email)...
I tried setting up a new account and choosing "USEnet news" as the
server type with each of the above as the configuration host but it just
timed out or gave other errors (IIRC, it couldn't find/determine the
domain).

Anybody got Evolution to read this ML as a newsgroup?

Michael

PS: apols if I've got any terminology wrong

When using a client to read news, you don't delete messages. You grab headers, and then select the message(s) you want to download. The messages stay on the server, you just download a copy.

Most clients that are also e-mail clients download the headers and treat them like they are messages in an inbox, then when you click on a message, they download the message associated with the header you click on.

IceDove does this, I don't specifically know about Evolution. In any event, you need to define a newsserver in your client. Otherwise you'll have to use a web portal instead.

Joe
