Hey,

I have a directory and several sub-directory and files reside within it. I'm wondering is there any command I can use to search for the certain string's occurrence? Can any of you help me please?

From the manpage of `grep(1)`:

`grep, egrep, fgrep, rgrep` – print lines matching a pattern

The `-r` option to `grep` might fit your need. Also see `find(1)` if you find yourself needing something more selective.
