- add the key to the luks-Partitions using `cryptsetup luksAddKey`
- make an entry for your stick in your fstab, e.g. `/media/key`
- copy the keyfile to the stick, e.g. to `/media/key/keyfile`
- change your crypttab to use the keyfile, e.g.
`usr-crypt /dev/hda7 /media/key/keyfile luks`
- change `CRYPTDISKS_MOUNT` in `/etc/defaults/cryptsetup` to include your
USB stick, e.g. `CRYPTDISKS_MOUNT="/media/key"`
- rebuild your initrd using `update-initramfs -u`

Hi, thanks a lot, that worked very well. Just a note: the entry for the
usb stick in fstab has to have the following options:
`uid=0,gid=0,umask=277`.

Thanks again.
