hi all,  
I had a perfect debian installation and as i boot up i am getting the  
error message  
hda:lost interrupt  
hda:DMA interrupt recovery  
hda:dma\_timer\_expiry:dma status == 0x24  
these three messages are coming in loop each taking some time :(  
mine is an intel pentium D processor and HDD is a 40gb seagate of  
model ST340810A

I'd look for potential hardware failure of that hd.

A
