Well I figured it out after having tried to re-install Etch 5 times

In the end it had nothing to do with poor old, much maligned Etch ... and

At Some point, I wrote:

So, I recommend you stop reinstalling the system and let the folks here help you. Everytime you reinstall the system you are changing stuff which makes it harder for these guys to help.

I would have thought that a clean install would have put EVERYTHING right back to "square one" ... :O)

yes, but that means we can't figure out what you changed so that we can all learn from it. of course this is all moot as the problem was unrelated, but I think you get my point. if we're on the verge of figuring it out, or even just have suspicions, a re-install removes the possibility of testing that idea. meh.

so

I use a second DSL router with the DHCP turned off as a way of extending the network access.

heh.

But as usual ONCE you know what the real problem is and have it fix you

Re: Lost Internet Access

think why the heck didn't I think of that sooner ... oh well more experience under the belt ... :O)

indeed. happy debianing and let us know when you're ready to fix all the rest of those boxes... you know, by removing XP ;)

A
