

Question about Mutt

There has always been a thing about Mutt which has bugged me, and lately it has nagged at me even more than usual. Perhaps somebody on this list will know of a way to change this.

In the index screen if I mark a message to be deleted it will cease to be accessible in any way, and if I scroll to it the cursor will skip it and move to the next message which is not selected for deletion. I have always assumed this to be the expected behaviour, and normally it is not really an issue at all. However, if I am in a mailbox for something rather high volume, such as the directory for this list, I often will delete many messages. If I delete a hundred messages and decide that I wish to undelete one in the middle I may not even be able to read the subject and use that to undelete. It is also a pain to have the cursor jump a hundred messages to the top if I move up one message too far.

So, what I am wondering is if there is some setting which would make messages marked for deletion available like a normal message, at least as far as the cursor goes. On my screen they are red, which is enough for me to know what will be deleted. I went through my muttrc line by line and just didn't see anything, and so hope that maybe it is possible and somebody here has figured out how to do it.

Many thanks in advance,

Patrick
