Hello,
Im new to debian and was trying to install gfs-tools using
aptitude("aptitude install gfs-tools")
It cant find it.
My source list is the default one.
Do I need any extra source?
Is downloading it from
<http://packages.debian.org/stable/admin/gfs-tools> the only way to
install it?
Thanks

It's in stable, testing and unstable. What exactly is your
sources.list?
