

HP Photosmart and Epson Stylus Photo printer compatibility?

Source: <http://linux.derkeiler.com/Mailing-Lists/Debian/2008-03/msg02452.html>

I am in the market for a new printer and I like HP for Linux compatibility. So I went to linuxprinting.org and printed out the list of HP printers to take with me to Fry's. Fry's has the HP PhotoSmart D7160, D7260 and D7460. The listing on linuxprinting.org has the PhotoSmart D7100, 7200 and 7400 all listed as working perfectly. Can anyone verify if the newer versions currently at Fry's work as perfectly as the older ones?

I also saw the Epson Stylus Photo R260 listed as working perfectly, but, again, the model available at Fry's was the slightly newer R280. Can anyone verify the functioning of this printer under linux?
