

Broken mouse cursor under X

Source: <http://linux.derkeiler.com/Mailing-Lists/Debian/2008-03/msg02495.html>

Since a recent upgrade I have broken mouse cursors under X. Instead of the regular cursor I get some sort of translation/vertical mirror of it. It affects all cursors (the all-purpose arrow cursor, the text cursor, the hand-that-points-at-a-link cursor...).

This wrapping cursor problem happens also on my G4 mac mini. I haven't seen any reaction to the original report. Has there been any solution?

(Please note that my address above is bogus, I disapprove of Debian's policy out outing email addresses to spammers.)
