I don't have /etc/samba/smbpasswd file.

pdbedit -L – return all users on my Debian system, but probably not everyone has samba account...

I need list only samba users. Any other help?

Please post your smb.conf here after carefully XXXX-ing any private information that should not be published. You could also post the outputs of "ls -l /etc/samba" and "dpkg -s samba-common".
