

Installing a Lenny package to an Etch machine

Greetings

I am wanting to install Homebank on an Etch machine. Trouble is, it looks like it is only available for testing/Lenny and Sid.

<http://homebank.free.fr/index.php?id=20>
<http://packages.qa.debian.org/h/homebank.html>

Is it best to simply give this a miss, or to download a tar ball and convert it to a deb package via (is it) alien?
Or, can one install a testing package on a stable machine?

Cheers for your input

A
