Folk,

In Skype 2.0.0.68 in Xfce4 in Lenny with kernel 2.6.24-1-686 a click on the answer button fails to open an incoming call. This happens on an IBM NetVista 6578-RAU and not on another generic machine. Usually I am able to call back but the problem certainly wastes time and aggravation.

Has anyone an explanation or solution?

Thanks, ... Peter E.
