I hate to say that I answered my own question but I did. I have win32codecs.tar.bz2 that I did the command: "bzip2 -df win32codecs.tar.bz2" to turn it into win32codecs.tar then I did "tar -xvf win32codecs.tar" to uncompress it, and then I did a "mkdir /usr/lib/win32" and after it made a win32codecs directory I then looked for wmvmod.dll and did a "cd wincodecs" once in that dir I did "mv wmvmod.dll /usr/lib/win32". It now is playing Windows Media like a champ! I got my file from: <http://www.mplayerhq.hu/MPlayer/releases/codecs/> Latest Win32 codecpack
Im not going to install all of the codecs yet im going to install them as needed. It seems some may conflict?

Thanks and sorry I bothered the list it was kinda off topic. It is part configuring Fedora.
