To: [fedora-list@redhat.com](mailto:fedora-list@redhat.com)

There was some discussion in days past about reasons for not using HTML email.

Has anyone noticed that there seem to be a LOT of spam messages making it thru the mailing list now?

Especially since that discussion was held. I have gotten at least 50 today alone.

I think it is time something is done to cut down this type of mail, or I (for one) will have to turn it off.

I cannot imagine the problems users with dialup connections are having with this.

Can the list manager do something to reduce this??
