I have a drive dedicated to flac files.

here's the fstab entry:

```
LABEL=flac /flac ext3 defaults 1  
2
```

--

Works perfectly like that. The partition is currently /dev/hdb1 and takes up the entire drive (flac files are huge)

At any rate – I'd like to put this drive into a firewire housing – will I need to make any changes to the fstab or will the LABEL take care of figuring out where it is and dealing with it that way?

I'm assuming the latter – but I've never dealt with firewire drives in linux before.
