To: Fedora Core user list <fedora-list@redhat.com>

Hi everybody!

I just got informed through personal mail by a list member that my GPG signed mail to the list, and equal mails by others, are uncomfortable to be read. Because of the signature the mail body comes as an attachment (ATT?????.txt) in text format. I think this is very uncomfortable for those readers, and being forced to open an attachment ...

The reader who informed me is using Outlook Express. I would now like to know if there are other users and clients having difficulties with GPG signed mails.

Alexander
