To: For users of Fedora Core releases <fedora-list@redhat.com>

I tried running "sudo chmod -s /usr/bin/smbmount /usr/bin/smbumount"

now mount reports:

libsmb based programs must **NOT** be setuid root.

4067: Connection to TK-MARKETING failed

SMB connection failed

So, again how would I set the /etc/fstab so that a user can mount the SMB share?
