I've looked on the fedora−list−test, and fedora−list for information about booting with the CD. I'm finding it difficult to find much with the search facility at:
http://www.redhat.com/archives/fedora−list/

I'll search on dosutils and it returns zero results. Yet, searching on cdrom and boot yields several hits where one of them includes:

<snip>
If you are making a boot disk under windows and you have the ISO images mounted to your CDROM DISC
then you can go into dosutils folder on the first disc <<<<<<<<<<<<<
Note this line
and use the rawritewin application to make a BOOT DISK on a 1.44MB floppy disk. The bootdisk.img file is also located on the first CDROM
installation
disk.
</snip>

Any suggestions on effective ways to use this search?

− Brian
