Hi,

I'm about to buy a new PC but first I want to make sure that FC2 (burned DVD ISO) will install on it.

The new PC contains an Intel 925X PCI Express chipset with ICH6-R, a ATi X800 graphics adapter, Soundblaster Audigy 2 and a Serial-ATA harddrive interface.

The only thing I want to know is if FC2 will install on it and if X.org will be able to give me graphical desktop. I know there isn't a driver from ATi yet, but maybe I can do something with the built in radeon framebuffer driver in the kernel.

I tried google and countless forums but no satisfying answer yet.

Hope you guys can help me out.

Regards,

Frans Coppens
