To: fedora-list@redhat.com

Sirs,

I am running IBM OS/2 ver 4.52 operating system box with two NIC cards and Firewall running a peer to peer TCP/IP/NetBios and TCP/IP file and print sharing.

In the past I had 3 laptops dual boot WIN98 and OS/2. These worked fine. Now I am moving the laptops to Fedora version 9. I have been unable to get any access to the Internet or to see OS/2 box or other Fedora laptops.

The OS/2 box is 192.168.1.1 and laptops are 2, 3, and so on. All the hardware in the laptops are supported by Fedora IBM Thinkpads 600e's and an A21e. I have no idea how to get the Thinkpads with Fedora installed to access the Internet via an OS/2 box and firewall or to share files and dirs.

Help much appreciated.

Regards,

David
