Greetings.

I have gShield firewall script from [muse.linuxmafia.org](http://muse.linuxmafia.org) running on my server. I'm having a hard time getting the port forwarding for the Bittorrent client working on my workstation.

Is anyone running a similar setup that can assist me with the custom rules and forwarding? I've tried to open up and enable forwarding on ports 6881:6889 to my workstation computer, but Azureus still complains of a NAT error when I'm trying to pull torrents down. It somewhat works, but I'm told that I can get better performance with this opened up. I'm trying to download FC Test 1 and get slow download speeds. It was quite slow getting core2 a while back, but I kinda waited it out.

Thanks.

-->Thom
