I've been through this five times now and on two of the tries, I've done just that and had the install fail. However, this last batch of ISOs came from a site reported in this list as being a reliable mirror, so I'm going to try skipping the mediacheck again and see what happens. If that fails, I'll get Roxio out, turn on the write verification so I **KNOW** my CD is properly burned.

If that fails, then I'll try using a different CDROM drive in my target machine. I seriously doubt that's the problem because I had Windows 2000 Enterprise Server on this box and had no problems with the drive at all. But, one never knows, so I swap it out and see....

Try skipping mediacheck, just for grins and giggles. There is a strong possibility it will successfully complete the install anyway.

Tried that, no go.

Yes. I'm booting from disk 1 and running "linux mediacheck" at the boot: prompt. I've also tried starting the install process which takes you into the mediacheck anyway.
