To: For users of Fedora Core releases <fedora-list@redhat.com>, Paul Howarth <paul@city-fan.org>

The initscript for named won't work because I think it's designed to use rndc, which NW disables (might be worth raising a bug on that).

Doing a kill -HUP on the named process should cause it to re-read its configuration file, but if NM is using a temporary file for this, the configuration file may have disappeared from under named's feet.

i have sent a bug

[https://bugzilla.redhat.com/bugzilla/show\\_bug.cgi?id=145680](https://bugzilla.redhat.com/bugzilla/show_bug.cgi?id=145680)

about the DNS issues.
