Hello there,

I have two cups queries, maybe someone can help?

a) Printing a ps file to a certain ps printer (HP Laser Jet 8150) via an lpd queue run on another machine always re-scales the image to something huge (A0??), so only a corner appears on the paper. I 'solve' this by converting ps to pdf and printing the pdf, which works fine, but can anyone suggest the root cause?

b) There is no 'paper tray' box in cups, and it is gray-ed out in OO.

Older cpus (FC1? RH7.3??) allowed tray selection...

How do I select the paper tray?

`lpr -PXXX -o media=upper XXX.ps`  
has no effect.

Thank you for your help,

Bill
