To: For users of Fedora Core releases <[fedora-list@redhat.com](mailto:fedora-list@redhat.com)>

hey friends,

I have configured samba with security =ads ,the samba is working fine with the configured options.As my domain consists of windows ,linux and unix clients and few of the users uses windows as well as Linux or Unix each user having its different machines.

Now i want the users which uses both Linu/Unix and windows should be able to see their home directories and other folders through windows.Just like a normal configured samba and users frm the network neighbourhood can see their home directories and other folders.

Is it possible if the security = ads is setup and if then a user wants to see his/her home directories and other folders from the windows.I have created a directory for my domain in home folder and if any users who is first time logging its directory is created under /home/mydomain/user.

If it is possible then please let me know.

Thanks in advance .

Regards

Ankush
