

Fedora: free up some disk space

free up some disk space

Well, according to df I have used up about 7 of the 8 gigs I have allocated to linux on my disk. I don't have any more to allocate from the windows partion, so I ask what can I erase to free up some space.

My /home directory takes up about 700 megs, even though when I add up all the unhidden files, I only get up to about 200 megs. I have half a gig in hidden files?!? How can I figure out where the bloat is and get rid of it?

And that means that my fedora installation, with no servers, is over 6 gigs?

Any ideas? Thanks.
