hi...

i'm somewhat confused. i'm researching various articles/sites to determine how to remotely install Fedora using the graphical install. I'd like to be able to have VNC start, and allow me to select the items from the remote Fedora install, as if i were at the machine with a keyboard/mouse. the articles i've seen talk about monitoring the process. The information that i've seen regarding the kickstart file, implies that you pretty much set the system, and it does the configuration for you.

i'd really like to be able to somehow remotely step through the Fedora install using vnc if possible.

so, is there a way to accomplish this?

bruce
