Hi,

I have been trying to listen to audio cd's /mp3's in linux,I have a dual boot

Fedora/Xp system. Linux is able to recognize the files on the cd's but it just would not play when I try to use Audio player. This happens for both regular cd audio as well as mp3 files.

I tried to see whether Linux is able to play anything or not , so when I used ' test sound ' in sound options, it did play that.

Plz can you guys help.

Thanks

ZeroCOOL
