Hello,

I can't get FC3 to install. I am currently running FC1 on this box and have run RH7.3, 8 and 9 on it.

Athlon 1Ghz, 768MB ram, TNT2 graphics card, Linksys LNE 100TX V5 nic, FC1 on HDB and Windows 2000 Pro on HDA using GRUB.

I tried linux ide-nodma and the media check runs fine.

Once Anaconda starts things get ugly. Tons of fast scrolling text most of which I believe says Bad Page State then it ends with..

VFS: cannot open root device "(null)" on unknown-block(8,3)

Please append a correct "root=" boot option

Kernel Panic - not syncing: VFS: unable to mount root fs on unknown-block(8,3)

I've been digging through the archives but haven't found anything that relates.

Any ideas?

Thanks,
Scott
