To: For users of Fedora Core releases <[fedora-list@redhat.com](mailto:fedora-list@redhat.com)>

Hi!

I have a dhcp server (FC3) on local network for linux/windows machines. One thing that bothers me is that when I check Active leases I don't have hostname for linux machines while for windows there are. I have on all linux machines setup hostname manually but they don't appear and therefore since I have also DDNS with DHCP I don't get those hosts into DNS. What am I missing in configuration here?

Regards,  
Sasa
