Question,

I am currently getting crond success msgs in the var/log/messages file every hour and would like to quiet it a little but it appears that the only way to do this is to edit the /etc/pam.d/system-auth file on the pam\_succeed\_if line but this file is regenerated any time authconfig is ran. Does anyone have a syslog.conf solution that would drop these messages into the var/log/crond file instead?

thanks
