

How to uninstall software?

I've not had much trouble installing software but now I want to take some off and don't know how. It wasn't done with Yum or with the package manager so it isn't clear to me how to remove it. I guess there must be about as many ways to remove a program as there are to put it on. Anyone know of something that works for everything or without instructions should I just try different things until one works?
