Hi all,

I have experienced a couple of freezes (at least one per day on my home PC and one on my laptop) since I installed FC4. On both machines I have been using a kernel I have compiled starting from source rpm package. I imported the settings from the last kernel I compiled under FC3. I cannot give any more detail about the freezes as there is no track in any log (it appears to be something like a kernel panic). Is anybody else experiencing the same problem?

Thank you for your help.

Bye

Alberto
