I mean that fedora rocks! I could not image how better (for comparison) to win it is...

Just wanted to know why this little things , that is the usual..

I see the mp3 part now... i knot either that ogg is better.. but, my entire collection are in mp3...

that's what I mean.. imagine .. every bug, every thing they want WHO they will call?
they don't speak english :)

Fedora: Re: Some thoughts for the future

and you may check it out.. there's nobody in the #fedora-br
if wasn't this mailist, the irc channel I would have deleted fc partition....

> >
> *You're really going overboard with this whole mp3 thing. It's really not
> that hard. Burning disk is easier in FC than in any windows i've used.
> Php editing: too numerous to mention. Videos? What about them?*
>

now I see that.. was a lesson to get it working .. but after this ..
is only fun
:)

> *>Linux always seeked to be better (AND IT IS for a long time !)

> >
> >
> *Might you have some time to spare?**

would be pleased, but my programmin skills are just php and as..

there something I'm wondering of,
maybe use something like chatbots engine (like pandora) to build the definitive
user-guided-CUI
i mean..
i get in linux for the first time.. online... and in the cui I can type
\$ hear nirvana dude!
if "hear" is not in the db.. he goes after the world-db and get:
1.Listen to music > choose program
after the user decides about the program.. its no longer asked .. so
anywhere he can say
\$ hear stones now
programs installations, user common needs all can be recorded in the user db
\$new friend john, skype number 35353
\$call john

if you install something new.. the program can something like record
what you doing and make a command for it.... maybe like ibm via voice
does to make voice commands.

--
why we have to learn ?
the pc should learn how I want things
this is the way to join GUI and CUI.... the better of both...
hahaha.. someone interested?
