/var/log/dmesg provides different information to what is contained in the usual boot.log file under FC2 or FC3 though ???

I am concerned because boot.log is a valuable source of information, and since upgrading to FC4 it hasn't been updated, despite a fair few reboots while configuring the system etc.... I was wondering if I've removed some rpm package that was needed to facilitate the writing of boot.log whilst purging my system of unneeded packages ??

dmesg seems to referred to as the kernel startup log.

Jim

The most common given name in the world is Mohammad; the most
common
family name in the world is Chang. Can you imagine the enormous
number
of people in the world named Mohammad Chang?
