Read the FC3 Release Notes:

<http://fedora.redhat.com/docs/release-notes/fc3/x86/>

In section for openssh:

"The behavior of ssh clients that are invoked with the `-X` flag has changed. In OpenSSH 3.8 and later, X11 forwarding is performed in a way that applications run as untrusted clients by default. Previously, X11 forwarding was performed so that applications always ran as trusted clients. Some applications may not function properly when run as untrusted clients. To forward X11 so that applications are run as trusted clients, invoke ssh with the `-Y` flag instead of the `-X` flag, or set `ForwardX11Trusted` in the `~/.ssh/config` file."
