Hi ,

The Monitor is set correctly and the on-board video chipset is picked up correctly as Nvidia GForce4 MX (generic).

- (1) After running Yum, I could not boot at all. Screen freezes on bootup
 - (2) Reinstalled original FC distribution
 - (3) tried tp run system-config-display, the graphical mode crashes the machine
 - (4) In non-graphical mode played around with some settings , although not 100% sure what to change
- Tried changing the screen resolution, but did not know the name of alternate drivers to try etc ...

Any more suggestions, most welcome !

Thanks in Advance

Sounds like a video problem, driver or monitor. Try running system-config-display and make sure the right video card and monitor are selected and see if that works.

Fedora: RE: Greeting or Gnome Crashing FC4

If above doesn't work, try running the command "setup" and go to X configuration and see if you can do it there.
