Sorry i jist read this. But how does one convert to .avi files? I used the command you mentioned and get this:

mplayer part1.avi

Playing part1.avi.

AVI file format detected.

MPlayer interrupted by signal 11 in module: play_audio
– MPlayer crashed by bad usage of CPU/FPU/RAM.
Recompile MPlayer with `--enable-debug` and make a 'gdb' backtrace and disassembly. Details in DOCS/HTML/en/bugreports_what.html#bugreports_crash.
– MPlayer crashed. This shouldn't happen.
It can be a bug in the MPlayer code `_or_` in your drivers `_or_` in your gcc version. If you think it's MPlayer's fault, please read <DOCS/HTML/en/bugreports.html> and follow the instructions there. We can't and won't help unless you provide this information when reporting a possible bug.

Do I yet need to get these dlls? I thought I had them. Mplayer seems to work fine with other things.

Best wishes!
