Ok, thanks to Warren and Steve for the tips!

Turns out that my swap failed to work. I thought that when I did a `mkswap`, a label would be used and the `fstab` would somehow get correctly set. I was wrong on both counts. grrr.

I had to hardpath the swap (`/dev/hda3`) into the `fstab` and then run `swapon -a` command. I rechecked swap and now I have something other than "0"

Again, thanks for the tips!

Glad to be of help!

When you ran the `mkswap` command, there is an option to label it.

```
mkswap -L dans-swap /dev/hda3
```

Hope that this helps!
Steve
