1. Did you try to run the install GUI by just pressing the "Enter" key?

2. How much RAM does the machine have? If it is less than 128MB I would not bother with FC4. I stopped with FC3 on an old P2-133 which has 96 MB RAM.

3. Assuming your system has enough RAM and your heart is still set on FC4 try "Howto Install Fedora Core over NFS", <http://fedoranews.org/down/nfsinstall/>
