Sounds like a GUI issue. Try installing in text mode. It would also be of help if you'd describe your system (motherboard make, hard drives, memory, CPU, etc.)

I don't think it's a GUI issue because this is still before the kernel starts. Doesn't matter whether I boot 'linux' or 'linux text'.

But you're right, I should have included my system config:

Motherboard: MSI K7N420 Pro  
CPU: Athlon XP  
Memory: 256 MB  
3ware Escalade 7000-2 RAID controller  
2x IBM Deskstar 120GXP 40GB hard drives  
Adaptec AIC-7850 SCSI controller  
AVM FritzCard PCI 2.0  
Matrox Millennium G550 graphics card  
Creative Labs CT4810 sound card

cg.

Try appending some random text to the kernel command line at the boot prompt. You may see a warning later, ignore it.

This has hit the list many times, take a look at the archives for more details.

Bob...
