Hey guys,

I know there is a lot of discussion about this topic floating around but I have not found a solution that works for me. Fedora Core 4 ships with the sk98lin module. I installed the driver but still no luck.

IIRC, that is the same network adapter my brother has on his laptop. He had to download the driver from syskonnct/marvell and he has to recompile it every time he updates the kernel. The latest kernels are improving support for that adapter, but it's not perfect yet.
