Audio CDs aren't mounted. Only data CDs are mounted. A data CD can contain MP3 files or other audio files that you can play, but I assume since you mentioned "audio CDs" you don't mean that.

You just insert 'em and if a CD player doesn't start automatically, you start one up from the menu.

That is what I observed but neither the standard gnome cd player claims there is a device error or totem opens and says it can't play the CD. So I am a little confused. You are right that the CD appears on the desktop but does not seem to be accessible.

--

Well with the update of totem the playing of the CD works so I guess one more problem is solved.
