After last yum-update I can't start acroread:

```
/usr/local/Adobe/ Acrobat7.0/Reader/intellinux/bin/acroread:  
error while  
loading shared libraries:  
/usr/local/Adobe/ Acrobat7.  
0/Reader/intellinux/lib/libJP2K.so:  
cannot restore segment prot after reloc:  
Permission denied
```

What to do?

Try:

```
# chcon -t textrel_shlib_t /usr/local/Adobe/ Acrobat7.
```

```
0/Reader/intellinux/lib/libJP2K.so
```

(that's all one line)

Paul.

Thanks, that solved the libJP2K.so. The chcon -t
textrel_shlib_t solved

also
the next libCoolType.so -permission denied problem and AdobeReader starts,
but

Re: AobeReader and FC5

new problems popped up:

There was an error while loading the AcroForm.api,
checkers.api, EFS.api,

ewh.
api,

MakeAccessible.api, PPKLite.api, SearchFind.api,
SOAP.api, Accessibility.

api,
Annots.api, DigSig.api, LegalPDF.api.

There seems to be some deeper problems?

Bengt

If you do "setenforce 0" (as root), does it then work?
If so, look in /var/log/messages and/or /var/log/audit/audit.log for SELinux

errors and see what's there.

Paul.

That's it, SELinux is behind the problem. Only I like to keep SELinux
enforcing-mode activ and at the same time I need AdobeReader. Anything to solve
that conflict?

Hi, I have done 2 things to fix it:

```
$ chcon -t  
textrel_shlib_t /usr/local/Adobe/Acrobat7.0/Reader/intellinux/lib/*.so
```

and then

```
$ chcon -t  
textrel_shlib_t /usr/local/Adobe/Acrobat7.0/Reader/intellinux/plug_ins/*.api
```

That fixed the problem for me.
