thanks for your help,  
i have searched for a simple tutorial or a way to use umask but i didnt find  
can u tell me a simple way yo make the default mask for a user 022 ?

also about configuring the server i am uploading to, i dont think that there is something wrnog  
with the server cause when i upload the same files from windows, it works with no problems

thanks in advance  
anymore help ??

You need to change the umask used when you are saving web files.  
(umask is a built-in bash function, so it is described in the bash  
man page.) Depending on how you are uploading the files, you may  
have to change the settings on the server you are uploading as well.

You also need to fix your default 404 error page...

But are you uploading the files the same way?

How do you upload with Linux and how do you upload with Windows?

This may make the difference. The program that you are using may also change permissions as an option.
